

The Rocket® IPC™ catheter is licensed for BOTH pleural and peritoneal use.

For **PLEURAL** use the catheter is indicated for intermittent, long term drainage of symptomatic, recurrent, pleural effusion. Including malignant pleural effusions that do not respond to medical treatment of underlying disease.

For **PERITONEAL** use the catheter is indicated for intermittent, long term drainage control of symptoms such as discomfort and shortness of breath resulting from symptomatic, recurrent, abdominal ascites. Including malignant ascites that does not respond to medical treatment of underlying disease.

Rocket® IPC™ catheter insertion sets are supplied in several formats depending upon your needs.

Rocket® IPC™ is an alternative method of managing ascites from the well-known short term drains or daily taps, this also allows for patients to be discharged and managed from home thus preventing recurrent admissions.

Suitable for the palliative treatment of patients with malignant ascites, maintaining quality of life, and improving control over discomfort and breathlessness associated with extended abdomen with a cost reduction.

R51400-16-00 for Pleural use.

R51400-16-PL for Peritoneal use.

Both these insertion kits come with a comprehensive list of accessories including drapes, needles and dressings.

R51400-16-MI is a smaller insertion pack designed to be used post thoracoscopy.
