

URIPOT[®]

The design features:

- **UNIVERSAL CONTAINER**, used as standard by most laboratory services, makes urine collection easy and cost effective.
- **PRE-ASSEMBLED**: simple and ready to use, suitable for either male or female.
- **INCLUDES AQUEOUS PRE WIPE** for easy, rapid cleansing of the genital area prior to sampling.
- **PAEDIATRIC & NEONATAL USE**: Uripot[®] is suitable for paediatric and neonatal collection when used under nursing or parental supervision to ensure adequate sample collection and child safety.

Rocket[®] URIPOT[®] offers a cost effective, ready to use urine collection in two styles to meet the widest range of patient needs.

URIPOT[®] has an anatomically designed filling pot with soft, smooth edges and is warm to the touch, making sampling easier and more comfortable for the female patient.

A special non return valve makes gradual filling simple and helps prevent overflow and spillage.
